BRIGHT COFFEE

CONTENT

1. Project Overview

2. Data sources and systems

3. Analysis

4. Conclusion

5. Recommendations

PROJECT OVERVIEW

PURPOSE

Analyze sales data from Bright Coffee Shop to identify trends in products, revenue, store performance, and customer behavior.

GOALS:

- Identify the top selling products
- understand revenue distribution by product category and store
- Analyze sales patterns by time of day and day of week
- provide actionable recommendations to improve inventory, staffing, and marketing

DATA SOURCES AND SYSTEMS

Data Source : Cleaned sales data from Bright Coffee Shop containing transaction records such as purchase date, product details, store location, and revenue information.

Data Systems/Tools Used

- Databricks SQL – used for data cleaning and querying
- Microsoft Excel – used for PivotTables and charts
- Github – used to store the SQL scripts and project files.

Revenue Analysis | Store Location & Month

Hell's Kitchen generates the highest revenue among all store locations, possibly due to higher customer traffic or a more favorable location. Revenue decreases slightly from January to February and then increases steadily from March to June, with June recording the highest revenue. This increase may be influenced by seasonal changes, as colder winter months can lead to higher demand for hot beverages like coffee.

BRIGHT COFFEE

Top Selling products | Top 10

Chocolate Croissant is the shop's best-selling item, generating the highest sales volume of about 3.300 units among all products and driving the majority of revenue, which shows how bakery goods especially indulgent pastries are the key profit driver and should be a focus for inventory and marketing strategies

Revenue Analysis| Product Category

Coffee generates the highest revenue, followed by tea and bakery. This indicates that coffee-based-beverages are the most profitable products for the coffee shop.

BRIGHT COFFEE

Revenue Analysis | Store Location & Time of Day

Morning hours generate the highest revenue. This is likely because customers purchase coffee before work or during their morning routine. Sales gradually decreases in the afternoon and evening, indicating that the coffee shop experiences its busiest period early in the day.

Analysis Revenue | Weekdays vs Weekends

Weekdays sales dominate the revenue mix, accounting for 72% of total income, while weekends capture only 28%. This suggests that the majority of customers purchase coffee during their workdays, likely as part of their daily routine.

Conclusion

- **Top store:** Hell's Kitchen generates the highest revenue, likely due to higher customer traffic and a favorable location.
- **Top products:** Chocolate Croissant and other bakery items drive the majority of sales, while coffee is the most profitable category.
- **Peak times:** Morning hours and weekdays are the busiest periods, with slower sales in afternoons, evenings, and weekends.
- **Monthly trend:** Revenue increases from March to June, with June being the highest month, likely influenced by seasonal demand.
- **Overall takeaway:** These trends highlight which stores, products, and times contribute most to revenue, providing guidance for staffing, inventory management, and promotional planning.

Recommendations

Store Location

- Staff Hell's Kitchen adequately during peak hours to maintain service quality.
- Adjust inventory levels based on store performance to avoid shortages.
- Run targeted promotions at lower-performing stores to boost revenue.

Top-Selling Products (Chocolate Croissant / Bakery Items)

- Keep top-selling products like Chocolate Croissant and other pastries fully stocked.
- Feature bakery items in promotions, combo deals, or special menus.
- Introduce seasonal or limited-time pastries to maintain customer interest and increase revenue.

Revenue by Product Category (Coffee, Tea, Bakery)

- Prioritize coffee inventory and preparation to maximize profits.
- Promote coffee-based beverages in marketing campaigns and bundle offers.
- Monitor tea and bakery items for stock management and promotional opportunities.

Revenue by Time of Day (Morning Peak)

- Schedule more staff and prepare inventory during morning peak hours.
- Offer promotions or discounts in slower periods (afternoon/evening) to increase sales.
- Ensure fast service during peak hours to maintain customer satisfaction.

Weekday vs Weekend Sales

- Focus on weekday operations where customer traffic is higher.
- Introduce weekend promotions or special offers to attract more customers.
- Adjust staffing schedules according to weekday and weekend demand.

Monthly Revenue Trend (Jan–June)

- Increase inventory, staffing, and marketing efforts during peak months (March–June).
- Use slower months (January–February) for promotions or testing new products.
- Plan seasonal campaigns to capitalize on higher demand during winter months (June
